

Plug-In Hybrid Electric / Gas Vehicle Added to Fleet

Santa Cruz, California

June 2019

MME recently acquired our first plug-in hybrid electric vehicle, a 2017 Ford C Max. We wanted a fuel efficient 4-seater car for our growing team to use for client meetings and site visits in addition to our 2007 Toyota Tacoma truck. We selected the environmentally friendly C-Max because it is a plug-in hybrid and delivers very low gas mileage. We installed a Seimens 30 Amp Stage 2 electrical charging station in our carport so we can conveniently charge the battery while parked.

Short trips around town are powered 100% by the battery; and the hybrid gas engine enables us to go long distances when needed. We get 50-60 miles per gallon and our current record is 795 miles on one small 14 gallon tank of gas! We've been happy with our choice.
