Budget: \$5.1 million

Mesiti-Miller Engineering provided civil engineering services for all on- and off-site improvements for the County's award winning public swim facility and community activity center.

The site improvements included a 750-foot long access road, parking for 160 vehicles, accommodations for bus and para-transit vehicles, pedestrian pathways to adjacent school and state park lands, a sanitary sewer lift station capable of pumping up to 850 GPM and much, much more.

Our design accommodated a 25-yard and a 50-meter lap pools, warm water recreation pool and children's wading pool as well as all the associated buildings.
