Budget: \$12.2 million

Mesiti-Miller Engineering provided all necessary civil engineering services for the construction of a three-story library technology center to house a library, tutorial labs, and a distance learning center. Our design utilized innovative paving techniques, such as grass-ring pavers and decorative paving stones, to provide aesthetically-pleasing pathways while meeting fire truck access requirements. We also designed several retaining walls, screen walls and sound walls using reinforced concrete and masonry.

During construction, we were able to revise our storm water drainage system to accommodate design changes in the main structure. Our flexibility and quick response time in making these revisions allowed construction to continue on a schedule without compromising the integrity of the storm water drainage system.
