American Public Works Association

David Glucs, PE

Engineer III

Professional Qualifications

Mr. Glucs has been with MME since 2022. He has been practicing engineering for over 15 years. His primary project experience is in wastewater and storm water system design consisting of pipelines and associated structures including manholes, catch basins, and lift stations. His work in existing pipeline rehabilitation specializes in trenchless installations including CIPP (cast-in-place-pipe), pipe bursting, and HDD (horizontal directional drill), as well as conventional excavation methods.

David's experience also includes construction administration and inspection of Public Works Capital Improvement Projects primarily in wastewater and storm water. Typical duties included project bidding, contract administration, submittal review, and field inspection and documentation. In addition, he has served as an inspector for private development installations in the public right-of-way including driveways, sidewalks, and sewer laterals.

Mr. Glucs has contributed to many civil engineering projects from the different perspectives of owner, designer, and contractor. He values the collaboration and teamwork required to successfully complete a project.
